Carlos -

Attached is the August San Jac update for elected officials. Please let me know if you approve. Below is text from the Status section:

STATUS OF CURRENT ACTIVITIES:

I. Community Outreach

EPA and its partner federal, state, and local agencies have announced the next community engagement meeting for residents on Thursday, September 22, 2011, at the Highlands, Texas community center. The meeting will focus on the completion of the recent Removal Action to stabilize the dioxin site; further site investigations, and related water issues. EPA staff will also participate in the September Community Awareness Committee with Harris Co. officials.

II. Source Stabilization

On September 2, respondents submitted a draft final report on construction activities for the time critical removal action at the San Jacinto River Waste Pits site for review and approval by the EPA. The draft document is currently under review by the EPA and is anticipated to be completed by September 30, 2011.

III. Remedial Investigation/Feasibility Study (RI/FS)

The Respondents are currently implementing the field sampling plans for the Fate & Transport Model Study, including the collection of upstream sediment load and current velocity data. Data for the low river flow condition has been collected. However, data collection for the high river flow conditions is waiting on a high river flow event. Soil samples from residential properties were recently collected from both the east and west sides of the San Jacinto River near the site within the floodplain. The samples were analyzed for dioxins. Finally, the EPA, Texas Commission on Environmental Quality (TCEQ), and other agencies met with the respondents regarding additional sampling in the southern impoundment, and the final sampling program is now being developed.

IV. Watershed Management

EPA continues to coordinate with the Port of Houston Authority, U.S. Army Corps of Engineers Galveston District and the TCEQ. The port and EPA will enter into a Memorandum of Agreement to facilitate the exchange of data to further investigate the SJRWP site and Patrick Bayou and will inform communities in the area. EPA met with the Corps in June and requested data for dredged material deposited on properties near the local communities. TCEQ envisions completing the total maximum daily load for Buffalo Bayou with regard to dioxin/furan by the end of 2012 and will put together a monitoring and

9549337

implementation plan to reduce levels in Buffalo Bayou to within national background levels.

V. Enforcement

The potentially responsible party (PRP) group continues to conduct the RI/FS under the Unilateral Administrative Order. With regards to the time-critical removal action, respondents have finished the capping work and have submitted the final report as required by the Administrative Order on Consent (AOC). Respondents continue to work towards resolving the outstanding issue of stipulated penalties resulting from prior noncompliance with the AOC.
